REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. Regarding Claim 1, Sih discloses a method for canceling echo (i.e., signal modification) comprising: receiving a far-end speech (i.e., input) signal (Fig. 5, reference $x(n)$; column 9, lines 14-16) at the input of an echo canceller filter (Fig. 5, reference 156, 158, 160); attenuating input samples relative to a preset value near the top of the range (i.e., to a value of a high amplitude portion of the input signal) when required and removing the attenuation when no longer required (i.e., dynamically scaling a binary range associated with filter taps) (column 17, lines 21-32); storing the scaled input values in the filter taps (i.e., in association with one of the taps) (Fig. 4, reference 120; column 7, lines 3-10) and multiplying (i.e., modifying) the input signal sample values (i.e., input signal) by coefficients (i.e., amounts) associated with the input signal sample values (i.e., stored portion of the input signal) (Fig. 4, reference 120, 122, h; column 7, lines 3-10). However, Sih discloses a fixed scaling value of -1.5 dB (column 17, lines 29-31) to be invoked when the input signal magnitude exceeds a threshold. As such, the scaling value disclosed by Sih is not determined based on a high amplitude value of the input signal, as claimed. Because the prior art fails to disclose every element of the claimed invention, Claim 1 is allowable.
3. Independent Claims 14, 17, 23 and 28 include limitations similar to those of Claim 1 and are allowable for the same reasons.
4. The remaining pending claims are allowable due to dependence from their respective base claims.
